

NARRATIVE: WHIRLPOOL CORPORATION

The Whirlpool landfarm site is located north of Findlay, Ohio on Twp. Road 215 at Main Street. During the summer of 1976, the 20 acre site was used as a landfarm for the disposal of wastewater produced from electroplating operations. Whirlpool states the operation was carefully planned and monitored in cooperation with the Ohio EPA. The wastewater which was applied is the same material which is now in the process of being delisted as a hazardous waste. Analysis of the wastewater shows levels below EP Toxicity limits. This waste material is currently dewatered and the sludge disposed in the county sanitary landfill.

In the past, the land has been in agricultural crops. Currently it is used as a baseball diamond. No adverse affects to vegetation were noted during an on-site inspection. This site appears to need no further action.
